

## Common Criteria (CC)

Verifiable IT security is becoming an increasingly competitive factor both for businesses and users.

The Common Criteria are internationally defined multiple standards (ISO/IEC 15408) which serve to compare and evaluate the IT security of products and systems.

IT products and systems which are evaluated according to Common Criteria (CC) receive valuable IT security certificates which are internationally recognized and which increase confidence in IT security.

The German federal office for security in information technology (BSI) has accredited mtG's test centre for IT security. mtG offers competent support in the evaluation and subsequent certification of your company's products.

Our fields of activity are: Public Key Infrastructures, Data Transmission, DRM-Systems, Databases, Firewalls, Operating Systems, PC Security.

## Ready ...

Where is your company with respect to Common Criteria?

- We provide **information and advice** on all aspects of CC as well as on evaluation and certification.
- We offer **instruction and training** within the context of CC.
